Information

GN 2294 Hinges are made of drawn profiled aluminum and are used on doors and covers, for example.

Given the external hinge wing, type A hinges allow mounting with a very small door gap. The type I is fastened in the door gap. The mounting screws are therefore inaccessible and hence protected from vandalism when the door is closed.

The hinges are delivered loose and must be mounted according to the accompanying instructions. Any hinge combination may be realized thanks to the modular design and available accessories.
